

E!'s Consolidated Yamaha EX5/R Bonus Disks

• • Volume 1 (Disks 1-3) • •

Yamaha previously released a set of eleven "Bonus Disks" for Yamaha EX5/R owners. Many good Voices, Performances, Waves, Arpeggios, etc. for your EX5/R can be found on these disks. Each disk covers a separate theme, or category of sounds, with titles like "Movie Textures", "Hip Hop", and "Best FM". However, loading all of the disks to preview the sounds can be quite tedious. That's where this release comes in: **Volume 1 of E!'s Consolidated Yamaha EX5/R Bonus Disks** combines the first three Yamaha Bonus Disks into a set of files that fit on a single floppy disk.

The first three Yamaha Bonus Disks are:

- **EX-VD01 Movie Textures**
- **EX-VD02 Super Syn**
- **EX-VD03 Analog Inspiration**

Contents

The .ZIP file you downloaded (EXVD1-3.ZIP) should contain the following four files:

- EXVD1-3.PDF - The file you are reading
- EXVD1-3.S1M - EX "Wave" (samples) File
- EXVD1-3.S1R - EX "Arpeggio" File
- EXVD1-3.S1Y - EX "Synth All" File

The three EX files can fit onto one floppy disk and can be used with a stock EX5/R with no upgrades. Additional sample memory (DRAM, or Flash RAM) is not required, nor is the SCSI option.

Loading into your EX5/R

Perform the following steps in sequence for the Voices, Performances, and Arpeggios to play correctly when loaded into your EX:

1. Load the WAVE file "EXVD1-3.S1M" (target RAM, or optionally FLASH if upgraded), selecting ALL to ALL. *Note: if you don't select ALL to ALL, the single wave you select will be added in sequence to existing waves in RAM. However, the Bonus Voices and Performances may not point to the correct waves.*
2. Load the ARPEGGIO file "EXVD1-3.S1R", selecting ALL to ALL.
3. Load the SYNTH ALL file "EXVD1-3.S1Y". Be aware that if you select "ALL" in the load screen, your system settings will be reset to factory default. If you do not wish to reset your system settings to factory default, I suggest selecting "Performance & Voice: ALL to ALL". You may opt to just load the voices and not the Performances (which are only two layers anyway!) by selecting "Voice: ALL to ALL".

Documentation for each of the first three Bonus Disks follows. Note that the Voice Bank/Locations in the documentation have been altered to match the actual locations as installed by the files in this release.

EX- VD01 Movie Textures

Programming: Mark Lingard

"Movie Textures" brings together a wide sonic arsenal of instruments and atmospheres, which will add depth and atmosphere to your studio recordings or live performances. Lush pads, rich orchestras, dramatic effects and atmospheric arpeggios are included that are suitable not only for writing film scores but also add that extra edge and depth to any composition. This bonus set contains 32 new voices and 12 new performances. Each voice and performance comes with two scene variations, giving the user instant access to some radical variations. All six control knobs on each voice have been given dedicated functions to give further dynamic control over each sound and, of course, are MIDI recordable. (Note: this bonus set uses ONLY stock waves)

EX- VD02 Super Syn

Programming Mark Lingard

Super Syn brings to the user a collection of new synth and dance sounds including fat bass, cutting leads, rich pads, evolving FX and more. The Arpeggio Sequences will give an instant groove to any composition, a great tool both in the studio and on the dance floor. This bonus set contains 32 new voices and 12 new performances. Each voice and performance comes with two scene variations, giving the user instant access to some radical variations. All six control knobs have been given dedicated functions to give further dynamic control over each sound and, of course, are MIDI recordable. (Note: this bonus set uses ONLY stock waves)

EX- VD03 Analog Inspiration

Programming Matthias Sauer

The Voice Ex-VD03 contains fresh, basic analog sounds for the EX5/5R and EX7. What's New? 80 Voices, 16 Performances, 16 User Arpeggiator Styles, 16 Waveforms. The first 32 voices of INTERNAL 1 are uniquely creative. Programs I1-033 to I1-064 are more traditional analog sounds. In addition, you find 16 Bonus waveforms with analog drum samples from I1-065 to I1-080 for building your own drum kit. (Note: the rest of Internal 1 also filled with voices, and some of them don't appear to be factory so check the whole bank out!).
